

Energizer Brand 9V 175mAh NiMH Battery Charger System

Impulse HVG Digital Device

TwinStim II Digital EMS/TENS Device

There is no better brand than Energizer®. Most other companies use off-brand batteries and battery chargers. Energizer is the preferred brand of most professionals. Energizer NiMH batteries do not have any 'battery memory' and can be charged as often as needed. This system charges batteries quickly and has a fold away wall outlet adaptor.

Important Note:

Many companies use an internal proprietary rechargeable battery system that has to be replaced by the manufacturer of the device after several years. This will not only create an expensive repair bill in the future but the claimant will be without their device for up to a month or more. If the claim is closed the claimant will be responsible for this excessive charge. The only expense the patient would have with our systems is a few dollars expenditure at a local retailer and they will not be without their device
